

Windows Event Log Analysis Lab project

project 1

1. List all available Windows Event Logs.
2. Identify which log contains authentication events.
3. Identify which log records system startup and shutdown events.
4. Identify which log records application-related events.

Project 2

5. How many successful logon events (Event ID 4624) were recorded?
6. How many failed logon events (Event ID 4625) were recorded?
7. Which account generated the most successful logons?
8. Which account generated failed logon attempts?
9. Were there any logon attempts using the Administrator account?
10. Were any new user accounts created? (Event ID 4720)

Project 3 (Additional Practice)

11. Were any user accounts deleted? (Event ID 4726)
12. Were any users added to privileged groups? (Event ID 4732)
13. Were any passwords changed or reset?
14. How many planned restarts occurred?
15. Were any unexpected shutdowns recorded?
16. Were any critical system events observed?
17. What was the latest recorded system event?
18. Was PowerShell used?
19. How many PowerShell operational events exist?
20. Were any suspicious PowerShell commands observed?
21. Which Event IDs occurred most frequently?
22. Were repeated failed logon attempts observed?
23. Was there evidence of brute-force activity?
24. Were there suspicious administrative actions?
25. What security observations can be made from the available logs?
